## **FIRST OF THE E-8s ARRIVE!**

The long-awaited Aristo-Craft ART-23600 Series EMD E-8 Diesels have started shipping from our facilities to customers. Shipping roadnames include Pennsylvania RR, Union Pacific, Atlantic Coast Line, Southern Railway, and Baltimore & Ohio. More roadnames, including the CB&Q and ATSF Chrome versions, will be following soon.

The Aristo-Craft E-8/E-9 is based on the popular passenger locomotive built by EMD in the 1950s. This detailed model includes working headlights, detailed and lit cab, smoke unit, metal grab irons, handrails and lift rings. The engine is well over two feet long, and it will ride on a pair of our three-axle dual-motor ball-bearing-equipped power trucks.

## 2007 ECLSTS ANOTHER SMASH SUCCESS!

by Harry Hartman

*Harry Hartman is the Large Scale Show Manager for the East Coast Large Scale Train Show and Southeast Large Scale Train Show.*

I will borrow some of the one-word phrases I heard being said at the 2007 ECLSTS this year by adults and children-- "Wow!" "Awesome!" Not only were these one-word phrases at the layout areas, but I also overheard them while walking through the vendor area. Those words were then followed by "I can't believe it only cost that much!" or "I can't believe how good it looks in person!"

Yes, the 2007 ECLSTS, held this past March 30-31 at the York Fairgrounds in Pennsylvania, was awesome again this year. It keeps growing and growing! I can remember my first ECLSTS and how excited I was walking through the ticket area into the vendor and layout areas. I felt that same excitement this year as Kathy and I put on our first Large Scale Train Show.

Before I get too wrapped up in reporting on

*The York Fairgrounds in York, PA --  
Home of the 2007 ECLSTS*

the show, I wanted to take the time to thank everyone who helped us behind the scenes. A big thank you to Ron and Sue Wenger for their answering many emails and phone calls of "How do you do...," "What do you do when ..." Many thanks to Lewis and the

whole Aristo team for their help and answers to all my questions along the way towards getting the shows ready. And, of course, a big thank you to all of you who came to the show!

I appreciate all of you that took the time to fill out the survey forms at both shows, as it will help us make the shows better. One of the findings of the survey forms from last year was that you wanted a way to ship your purchases back home. As a result, we got together with the UPS Store in York and they agreed to have a booth at the ECLSTS. The two workers at the UPS booth told me that they had numerous comments about them being there. After seeing the UPS Store booth and the great prices on what they had been looking for, many show visitors who were skeptical about buying large quantities let their wallets run free and purchased up a storm. The UPS Store will be back next year at the 2008 ECLSTS. We are trying to work out a similar deal with a shipper in the Perry, Georgia area for the SELSTS.

*Lewis Polk and Michael J. of Aristo-Craft Trains  
answer questions from show attendees*

This year's ECLSTS had several new vendors showing their products to an excited 5,600+ crowd that attended the show. There must

*(Continued on page 3)*

*TATE The Bear listens in at storytime.*

*(Continued from page 2)*

have been some great bargains at the show because I saw a constant flow of packages going out the door, and then they came back in to shop some more.

Some of the manufacturers choose to release information and/or pre-production samples of new items for their line of products at the ECLSTS. This was true of Aristo-Craft Trains. They had two items on display that caught my eye right away. The first was the dealers display for the Eggliner. This display piece will not take up a lot of room on the countertop and has the Eggliner running around on a circle of track with the Aristo-Craft logo in the middle. This would even look nice on a desk at work or on a coffee table at home.

The second item that caught my eye was a barrel with the train running around the outside. In the center, there appeared to be some "smoke" or "fog" rising out of the barrel with a multi-colored light shining through the fog. Sometimes the fog would cover the engine running around the outside of the barrel. Lewis Polk, President of Aristo-Craft Trains, said that he is putting this together as a kit to be available later in the year. You will have

to purchase the barrel at your local hardware store, but the rest will be available through your favorite Aristo-Craft Dealer. Sign me up; I will take one when they are available.

It will look neat on my patio.

The crowd-pleasing ole bear TATE was in attendance at the ECLSTS and thrilled many of the younger train fans. TATE made his way through the crowd several times over the two days. He was spotted making his contribution to the Missing and Exploited Children's Fund at the Quarter Car. I deposited my collection of West Virginia quarters to the cause. TATE was up to his old tricks and was caught on camera as he tried to steal a big plate of cookies from one of the vendors at the show. When the ole bear sees picnic baskets or food, he goes crazy and has to have it. After we got him calmed down, he used his reading skills to read to the young children three times. TATE read "The Little Engine That Could," "Mr. Punneymoon's Train" and "Here Comes The Train." At the last reading, one of the youngsters wanted his mother to read to him so TATE took a break and listened to her read.

The ECLSTS had many very good "how-to" seminars, as well as the future of garden railroading. One seminar came about because of the survey forms that were filled out in the

*(Continued on page 4)*

*The UPS Store Booth at the ECLSTS turned out to be a big hit!*

*Aristo-Craft's Aixa Lebron sets up an Eggliner display.*

*(Continued from page 3)*

past. Marty Cozad agreed to take on the topic of "Okay, I have purchased my Starter Set. What do I do next?" This is a question many new to the hobby ask. Some have expressed concern and a few have given up garden railroading because they said, "I can't build that huge, beautiful layout." This topic again was discussed in Marty's evening discussion at the hotel on Friday night. His topic started out as "The Finances of Garden Railroading" and came back to "How To Start Your Layout." This 1 1/2 to 2-hour discussion brought out many great points that Marty took notes on. Thanks to Marty for hosting this discussion group and all those that attended.

Now it is time to start looking forward to the 2008 shows. Yes, we are looking very

hard at another Mid-West Large Scale Train Show. No site has been chosen yet. We are looking at sometime in late September of 2008. I would like to issue a challenge to each of you that reads this article. I would like to challenge you to talk to six new people about garden railroading. Invite them to come enjoy your trains. Tell them that you started with a small, doable-by-anyone layout, even if it was around the Christmas tree or just on your concrete patio. Then try to bring two new families to the 2008 shows. There is nothing more exciting than to share your hobby with some friends and they get excited about your hobby to the point that they start in the hobby.

To help this hobby grow, it is going to take each of us sharing our excitement about the hobby to others. Just think what the manufac-

turers and vendors will do when they see the show halls so packed that we have to expand to two more buildings just to hold everyone. Many new and exciting products will start to appear at a faster rate and instead of reading about local garden parties we will be reading about garden railroad parties. Thanks and see you in 2008!

*2007 ECLSTS T-Shirt Logo*

The date of the 2008 ECLSTS is March 28-29, 2008.  
Mark your calendars now!

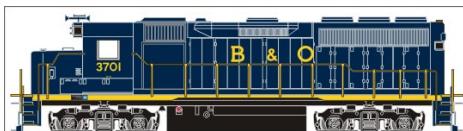

## NEW PIC OF THE ARISTO-CRAFT GP-40!

A new engineering sample of the Aristo-Craft ART-23500 Series GP-40 was shown off at the 2007 ECLSTS this past March. The GP-40 contains the new 2-axle drive system with a giant 540 motor and Aristo-Craft's patented gear system with 16 ball-bearing races per loco. It includes the patented smoke system as well and has our RCC/DCC port for plug and play.

Also new is a first look at the paint schemes for the upcoming engine. The loco will come in over 11 different roadnames.

Expected delivery of the Aristo-Craft GP-40 is Fall 2007. Call your dealer or contact Aristo-Craft for more information.

## Motor Block Conversion of Two-Axle Aristo-Craft Diesels Revisited

Text and Photos  
by Ron Wenger

**Forward: This article should have actually preceded the article on the conversion of**

**the USA Trains SD40-2 three-axle diesel to the Aristo-Craft Prime Mover three-axle motor block. The concept for the method used to convert the three-axle diesels came about as a result of an idea to come up with an easier way to convert the older versions of the Aristo-Craft two-axle diesels to the new style motor blocks. I was searching for a method to convert the two-axle diesels for those folks who do not like to completely disassemble a locomotive or are intimidated by the thought of doing so.**

***Before we go any further into the article, if it is your intention to do this conversion so that you can add extra weight to your older Aristo-Craft diesel, STOP NOW! Please read the following before you decide to undertake this modification.***

**I hate to break it to you, if you want to add extra weight, the journals of the older diesels will not take the weight. The added weight will cause the journal bushings to wear at a rapid rate. You will want to go ahead and use the instructions up on the Aristo-Craft web site (<http://www.aristocraft.com>) to convert whichever two-axle diesel you have to the new motor blocks and "A" frames. This will allow you to add close to 4 pounds of extra weight to your locomotive. However, the following instructions will allow you to convert most of the older two-axle Aristo-Craft locomotives without disassembly.**

**Concept:** One evening, while using a larger tap-and-die set to rethread a bolt for my lawn tractor, it suddenly came to

me-- Why not make axle tips for the new blocks that would allow for a one-for-one exchange. I scrounged some parts and tools and made a set of axle tips for an older "F" unit that I had not yet converted to the new motor blocks. I saw that it would work and the rest is, as they say, now history. I told Lewis Polk, President of Aristo-Craft Trains, about the approach that I was taking with the newer motor blocks, and at Lewis's request, I have made a couple prototypes of these for the factory to take a look at. Lewis wants to check on the feasibility of having these made and put in a kit. This kit would work for the older Aristo Craft two-axle locomotives or the three-axle motor blocks for use in the USA Trains three-axle locomotive since only two axles are needed for each end of the locomotive.

Now, if you are like me, you are not going to wait for the factory to make these, so we are going to make our own. It takes less than an hour to make eight of these. It actually takes more time to find the materials and tools needed to do this than it does to do it. However, if you are intimidated by doing this type of conversion, you are going to have to wait for the kits to be developed.

Let's get started:

**Note 1:** As with any how-to article, I highly recommend that you read this entire article through once before starting on this project. If you do not understand any portion of the article, you may want to reread it again before starting, as this is more complex than some of the how-to articles that I have written for the Insider before. If you still do not understand it after reading the article, send my alter ego Uncle Rusty Wrails an email at [wrailsrt@ix.netcom.com](mailto:wrailsrt@ix.netcom.com) and he will attempt to help you. Rusty does not always respond within a day or two, but he will get back to you as soon as he can.

**Note 2:** If you have one of the oldest versions of the two-axle diesels, which are primarily the FA/FB units,

**first made in Korea, you may have to do some wire cutting and splicing. I recommend doing one motor block at a time and using the Radio Shack jumper wires to verify your electrical connections prior to soldering. I have found this to be very helpful over the years as from time to time a wiring color will be deviated from by the factories. You can also do this to ensure that the locomotive is going in the same direction that the lights are shining in and that both motor blocks are going in the same direction**

**Step 1:** The first thing that you will want to do is procure two of the two-axle Aristo-Craft ball-bearing motor blocks.

*Aristo-Craft two-axle motor block*

**A full list of tools and materials is as follows:**

### Tools:

1. Micro Mark #82323 M3.0X.50 Die (I highly recommend getting both the tap and die and the handles for both the tap and die. This is a common size for Large Scale and has many uses.)
2. Soldering iron.
3. #0 small Phillips-head screwdriver
4. Small flat-tip screwdriver
5. Needle-nose pliers
6. Side cutters
7. Small hack saw or lineman's

pliers to cut brass rod  
 8. Dremel tool or small grinder

#### Materials:

1. One pair of Aristo-Craft two-axle motor blocks
2. **Micro Mark #60228 1/8<sup>th</sup>-inch brass rod**
3. Small heat-shrink tubing or electrical tape
4. Solder
5. Small 3-MM nuts.

Don't let this list intimidate you! It's actually pretty easy.

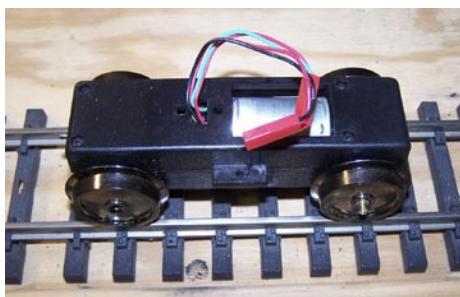

#### Step 2:

The first thing we are going to do is a manufactured eight-axle end. This is not as hard as it sounds, but if you have a problem with doing this, you may want to get someone a little more adept do it for you. As I stated above, Aristo-Craft is looking at having these manufactured for the two-axle diesels and they will work with both the Aristo-Craft two-axle motor blocks and the Aristo Craft three-axle motor blocks.

You will need to secure the 1/8<sup>th</sup>-inch brass rod in a vise, leaving only about three inches sticking out of the vise. I usually take a Dremel tool and just slightly taper the end of the rod so that it makes it easier to start the tap on the rod. Slowly thread the rod so that you will have a section about 5/16<sup>th</sup> of an inch long. Clean off the shavings and screw one of the small threaded 3-mm nuts onto the rod as tightly as you can get it, being careful not to twist the rod. Now cut the rod about 1/4 of an inch from the nut and screw it into one of the axles on one of the motor blocks just enough to hold it in place. Then, take your Dremel tool and smooth or round the end of the axle so that it does not wear on the inside of the bushing in the sideframe. Once you have made eight of these, you will be ready to start conversion of the Aristo-Craft motor block for use with the older sideframes.

#### Step 3:

Once you have rounded the tips of the axles, you can go ahead and remove the screws that hold the wheels onto the two-axle motor blocks. Leave the wheels on and screw the new axle tips in as far and as tight as you can. I left the lock washers off and just screwed these in as tight as I could, using a set of needle-nose pliers on the sides of the nuts. Once you get the conversion completed and tested, you may opt to use loctite to make sure the axle tips are in to stay.

*The two-axle motor block and connector*

However, here again, if at some time in the future, you elect to use the new sideframes and disassemble the locomotive and do this the way the conversion was intended to take place, you will need to remove the axle tips and replace the original screws and lock washers.

If you do elect to use loctite, I would only use the blue, as it is easier to remove the screws with the blue loctite.

#### Step 4:

**The first thing you're going to need to do in order to get started on this step is turn the locomotive upside down so that you can remove one of the sideframes. It really does not matter which one you remove. However, out of habit, I always orient the locomotive front end to my right and work from that side, and most of my commentary is usually based on the locomotive being oriented with the nose to the right.**

**You will want to remove any parts that could become damaged by turning the locomotive upside down, so I suggest that you remove these. I use a stand**

**that I purchased at the first ECLSTS held in York, PA about six years ago. Before that, I used towels to hold the locomotive in place. I recommend that you use something to hold it steady and protect the top of the locomotive from being damaged.**

There are three screws that hold the sideframes in place-- two each at the top of the coil springs and one at the bottom of the molded plastic leaf spring on the sideframe. Remove these screws and lay them aside.

Under the sideframe, you will see a wire that is one of two, which goes from each sideframe to supply power to the locomotive from the power pickups in the wheels. On many of the older locomotives, these will go directly to the boards on the locomotive. On some of the newer models made just prior to the new ball-bearing motor blocks, they will go to a modular connector.

*Close-up of motor and wiring*

Note: If these do not have a connector, they will have to be modified, which will require the addition of a modular connector like those used on the new motor blocks. A set of these connectors is included with the new motor blocks and sideframes. I will describe how to do this in Step 5.

**If they do have the connectors, you can disconnect the connectors and lay the motor block aside. One word of caution here: Usually the set of wires going to the motor block have**

a blue or green wire in the pair. Mark these some way that you will remember so that if you go to change out the motor block at a later date, you will know which pair go to the motor. You also want to make sure to do this.

When you remove the sideframe, you find that some of these in some of the last versions made prior to the ball-bearing version have a spring-loaded brush in the bushings that was intended to make contact with the ends of the axles. These are not needed and may be discarded or, if you're like me, put in the old parts bins for a "just-in-case" situation.

#### Step 5:

There should be a set of connector wires with male ends included with the new motor blocks. If not, you will need to contact Aristo-Craft to get these.

These wires have white female ends that are indexed. By indexed, I mean one has a three-hole connector and the other set has a two-hole female connector on the ends. There is an up side and a down side to these wires as both of the sets of connector wires are red and black, which can lead to confusion. After I have completed the conversions, I have gotten in the habit of indexing one or both sets of these connectors to the motor block by marking them with a paint pen or other paint so that they can mate up properly.

Now at this point, you have the option of removing the cab of the locomotive and seeing if your version has the corresponding indexed plugs. This will require you to remove the side rails on some locomotives and then the cab or just the cab by itself, depending on which locomotive you are converting.

If you are not sure, I would remove the cab and check. To my knowledge, all RS3s and most, if not all, of the U-25Bs (U-boats) have the corresponding indexed plugs. This will save you a lot

of effort in cutting and splicing wires on the locomotive. If at some later date you want to remove the weights on the floor of the locomotive and change the "A" frames, this will help make the job simpler.

If you have one of the early versions of the FA/FB, which is all of the Korean-made "F" units and, I believe, the first Chinese-made run, you will need to cut and splice the wires. Thus, there is no reason to take the cab off the locomotive.

At this point, you will want to cut and splice the wires from the bottom of the locomotive. On most of these locomotives, the power-in to the motor block wires is the green-and-red or blue-and-red wires. These will need to be spliced as follows:

**Red to Green wire and Black to Red wire on the pigtails that have the male red ends.**

Underside of motor block and wiring.

The power-out wires from the motor blocks will go to the black and white wires. These will be spliced as follows:

**Red to White wire and Black to Black wires on the other set of pigtails that have the male red ends.**

Here again, I highly recommend that you only do one end at a time and use

a set of Radio Shack jumper wires (these are about 12 inches long and have an alligator clip on each end) to make sure that you have the correct wires and that all the lights are aimed in the same direction that the motor block is going. These clips cost about \$5 a set and will save you a lot of time and money if used wisely. By the way, these are good for finding non-conductive gaps in your track or switches. By jumping the joints with these, you will find that the locomotives will start to move when you hit one with a gap.

The transmission on each of the new motor blocks (little floating part of each motor block) should be pointed to the fuel tank. Sometimes folks swap these around, but the proper orientation is with the no-flex end facing out.

Diesel laid upside down for inspection.

#### Step 6:

At this time, once you have made all the connections, you may install the new motor blocks in the sideframes, replace the sideframe that you removed and go try out your locomotive. You will find that the new motor blocks will cause the locomotive to start moving at a lower voltage, run smoother and have more power.

This adds a lot of new life to the older diesels, many of which the road names are no longer in production or the paint jobs have evolved into something else.

Enjoy! Ron

## The 2007 Aristo-Craft Railroad Club

CONTINUE YOUR LIMITED EDITION COLLECTION OF ARISTO-CRAFT TRAINS  
WITH THE 2007 CLUB CSX & BNSF 100-Ton Coal Hoppers

### MEMBERSHIP INCLUDES...

- Collector editions of Aristo-Craft Trains available for exclusive membership prices at our on-line store <http://www.aristocrafttrainstore.com>.
- A special membership certificate and card with a specific number assigned only to you.
- A year's subscription to the "Insider" e-mail (internet) newsletter, containing info on Aristo-Craft Trains and advance information on new arrivals and in-stock items.
- New catalogs, price lists, and flyers as available.
- Promotional offerings as available.

### TERMS

Aristo-Craft Railroad Club Membership does not allow you to purchase any Aristo-Craft Trains product line direct or from any authorized aristo-craft trains' wholesalers.

Aristo-Craft Railroad Club Membership is for calendar year 2007 and expires 12/31/2007 regardless of your sign up date or renewal. Membership dues are subject to change for future enrollment year. Your number is assigned permanently with the year appended to the number with renewal.

Memberships are non-voting.

Please allow 6-8 weeks for processing of membership.

2007 Club Models expected mid-year 2007

## You Can't Get These Great Items Unless You're An "Insider!"

Join the most exclusive club in Large-Scale Model Railroading by becoming an "Insider" member in the Aristo-Craft Railroad Club!

With your \$25.00 2007 Aristo-Craft Railroad Club membership, you can order specially priced models directly from Aristo-Craft. This year, we are offering the 100-ton Coal Hoppers in CSX and BNSF. Each version will come in six different road numbers, with CSX hoppers having three road numbers with the CSXT reporting mark and three road numbers with the NYC reporting mark.

**Join the Aristo-Craft Railroad Club Today and start enjoying the benefits of membership!**

## G GAUGE CHRISTMAS STARTER SETS--

A TRADITION THAT KEEPS GETTING *BIGGER!*

by Lewis Polk

A model train around the Christmas tree has become a staple part of people's memories about the Christmas holiday. G Gauge trains do that job of rein-

vigorating people's memories very nicely. G Gauge trains are big enough to be seen, easily handled by children, easy to stay on the track. G Gauge track can be put on the floor without a platform, and the trains run quietly and enhance the WOW! factor suitable to the enchantment of the Christmas holiday.

Aristo-Craft Trains makes its famous "North Pole and Snow Flake Railroad," with an extensive line of Christmas cars and locos to keep expanding the collection. For 2007, we are expanding the collectible concept to include three annual limited-edition cars, with the year prominently displayed in a gothic, gold lettering. This year's cars will be a Sierra Coach ART31025-07, a 40' Box Car ART46025-07 and a 20' Box Car ART40325-07. Frankly, it is a challenge to gauge production quantities the first time around, so we recommend placing these on order early, as these items will be shipped out in date order. Many families have Christmas ornaments as family heirlooms and we hope our trains will be kept and remembered in the same way.

Aristo-Craft starter sets are unique in that they include our well-established Train Engineer Wireless R/C System, which makes operating the train set a more interactive operation for a child, as they can keep the control in their hands and control the train from anywhere in the room. The U.L.-listed wall pack is safely attached to the track with a low-powered D.C. output and the child has no interaction with the

Christmas Passenger Starter Set Packaging

power source. This means the child can safely play with the trains with little or no adult supervision, which is not possible with most other train starter sets.

Our track is a solid brass rail with a 70% copper content and will not easily bend out of shape with normal usage. We include special tie wraps in each set to allow you to keep the track together on a temporary

basis without screwing in the more permanent connections. After the holidays, you can simply cut the straps and put the set away until next year. Each track has a slot in the first and last tie to allow a snug fit of the rail joiners and to stop the track from separating while trains run on them. This solidifies the track into a strong circle that

(Continued on Page 11)

G GAUGE CHRISTMAS STARTER SETS

(Continued from Page 10)

will keep its shape during the extensive use by the normal family and their guests at this busy time of year.

The high quality of our track, with its lifetime warranty, means this setup can be expanded each year and set up with the Christmas tree as a family project. Aristo-Craft track is indoor/outdoor, which means it can also be moved out of doors in the warmer months and can form the basis for a garden train layout, where the fun really begins. Gardening is America's #1 hobby and mixing the movement and reality of a train outside in the garden with your plant scheme is fun for the entire family. Add the beautiful scale buildings, figures and vehicles to the look and you can create an entire Lilliputian world of your own that keeps the family together at home. What other hobby is there that the entire family can share and

do at home. Trains can be run on a patio, around a pool or blended into the garden flower design of your backyard. Young and old train engineers alike can spend many hours enjoying and controlling the movement of the trains around their world.

Each set comes in its own brown cardboard box with a nice gift package inside. This means the set arrives factory fresh to the consumer and can be easily stored back in the box for reuse the next year. Each set package is engineered to have no slack fill and be an economical size for shipping. Our packaging has photos of the trains as typically used in the garden so that its year-round capability is featured. The radio is available in three different frequencies so that it's possible to have more than one train track operating at a time if you so wish. Each box also has a strong handle for easy maneuvering of the

package and for movement to and from the tree after the holiday period is over. Every section of track has two screws underneath that hold the rails in place and double as contact points for wire leads to the power supply. This means no special wiring block is needed and the wires can be attached wherever it's convenient. Aristo-Craft also makes a vacuform roadbed that can be put down to protect the trains from the carpeting in a room and vice versa. The new production of the vacuform roadbed will come in full circle quantities to match the track.

We speak to a lot of people at train shows and invariably we ask how they got started in the hobby of garden railroading. More often than not, the answer is with a starter set they received as a present themselves. Typically, a starter set generates additions to the set immediately after Christmas. And then expansion of the set is an immediate goal or planned for the next Christmas season. The use of a model train at Christmas is the best way to grab a new collector/hobbyist into the enjoyment of model trains, and a happy experience with their first train set is something that will be remembered all of their lives. Using a reliable Aristo-Craft train starter set is the best introduction to our realistic line of American train products and we have worked very hard to make the products amongst our very best. The first impression is a lasting one and we want to convert the Christmas user to a year-round hobbyist if at all possible.

Enjoy your trains! We're working on your railroad.

All the best,

Lewis Polk, President

Aristo-Craft Christmas Lil' Eggliner

## Body-Mounting The Aristo-Craft Coupler

Another Ultimate Kit Bash

Text and Photos by Marty Cozad    Forward by Ron Wenger

Marty Cozad, a frequent Insider contributor suggested the following article to Lewis at the ECLSTS and Lewis in turn sent Marty to me.

This is a subject that Bill Frank, Aristo-Craft's first Customer Service Manager and longtime proponent of Aristo-Craft couplers, and I discussed many times in the past. We even came as close as starting to building a coupler-mounting gauge once. However, other things always seemed to take our interest in different directions. There were small things like taking over 100 Bachmann coal hoppers and putting Aristo-Craft trucks, couplers and brake gear on them, which made them into 70-ton coal hoppers, all painted and marked for B&O service with a separate number on each car. Somehow we just never got around to this issue again, although it would usually come up at monthly running sessions either brought up by myself or one of the other diehards in our local club. In fact, in the past six months, we may have discussed this at least three times.

Marty, like many of us, started out in the smaller scales, using those Kadee couplers

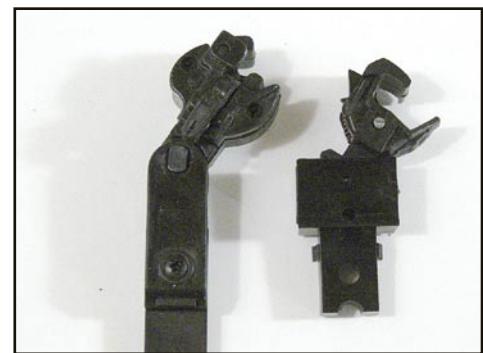

which always seemed to work so well in HO and N scale. Marty, upon starting in G Gauge, converted all of his rolling stock into body mount Kadees because of their past performance in the smaller scales. Marty has a frugal (cheap, as Marty's wife Carrie defines it) side and the thought of tossing out or just storing all of those great working Aristo-Craft couplers was troubling.

It's a known fact that body-mounted couplers work better than truck-mounted couplers in most cases. There are a couple of times that they don't, but more often than not, body mounts just work better. This is due to the fact that there is no such thing as a standardized coupler in G Scale. But for many folks out there, the Aristo-Craft coupler has become the defacto standard. It is for me; I have locomotives and cars from most of the manufacturers and they all have Aristo-Craft couplers on them. I buy them by the 100-count bag as the guys in the local clubs are always looking for couplers. Most of them use these as the standard coupler for their layouts.

Marty has come across a slick way of body-

mounting Aristo-Craft couplers, which will save you money if you're willing to do a little shimming and cutting.

Marty says this is just another stage of growth in this hobby.

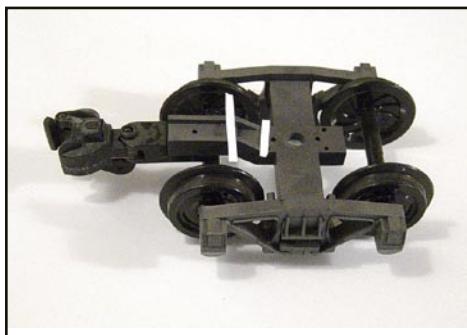

(Fig. 1)

The photo above (fig. 1) shows an Aristo-Craft coupler on the left and a Kadee #789 coupler on the right. What I have noticed is that the side-to-side motion of both couplers is about the same. The #789 will run fine on 8 ft. diameter curves without rubbing the wheels.

I also decided to use Kadee "G" height (1 1/8") from rail top to the center of the coupler

since most of my friends are running using this standard.

(Fig. 2)

This photo (fig. 2) shows the two points at which you need to cut the coupler arm. By going to a body-mounted coupler, you free the truck to move more independently from the coupler.

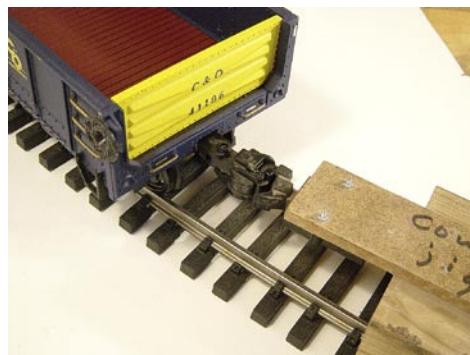

(Fig. 3)

This photo (fig. 3.) shows you the angle you will need to put on the coupler by filing down a little of the material. This will keep the coupler straight and level when mounting it on a car. Don't remove too much, just the angle required to keep it level.

In the next photo, I'm using an Aristo-Craft gondola as an example for this conversion. I have centered the coupler and marked what needs to be cut and removed on the car. Individual cars may vary as to what has to be removed based on the material that is in the way of the coupler.

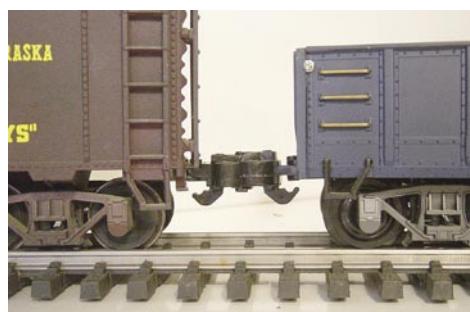

NOTE: The body-mounted couplers will not mate up with the truck-mounted couplers so you may want to make a transition car while you are converting your rolling stock. The more cars you convert, the faster you will get at this process. On some cars, you will need to remove one of the screws holding the body to the floor. However, this will not harm the integrity of the car, as there are usually two or more screws on each side to hold the body in place.

The nice feature of this conversion is that it places the cars closer together for a more realistic look.

(Fig. 4)

This photo (fig. 4) shows my homemade jig that I use to set my couplers at a height 1 1/8" off the rail. You will need to get longer screws to mount your coupler arm. The size will vary based on the type of car to be converted. I use both 1/2 - and 3/4-inch number 4 pan-head screws, but you may need to go a little longer on some cars. Two screws per arm are required to hold the coupler straight. This is your only real expense in this conversion.

(Fig. 5)

This photo (fig. 5) shows the results of this conversion on an Aristo-Craft boxcar and gondola.

Doing the locomotives will be more of a challenge. If you have tight curves, I would recommend leaving the coupler as installed by the factory and using a coupler transition car. The photo above (fig. 6) shows the coal hopper after conversion. The Aristo-Craft coal hopper

(Fig. 6)

is extremely easy to convert and works well as a unit train that has a more realistic look than when ran with truck-mounted couplers.

The primary benefit of using body mounts is to free the trucks when backing and setting the cars closer together. This allows for backing of longer trains without derailing the cars and for overall smoother operations. Not to mention, it is a more realistic-looking train.

Converting the Aristo-Craft tank cars and two-bay hoppers will require the use of shims to attain the correct height. The Aristo-Craft 100-ton hoppers and Evans cars will be a relatively easy conversion.

The conversion of the Aristo-Craft passenger cars will be based on how large a diameter of curve and switch you are using.

While this conversion is not for everyone, I am sure that some of you may find this information helpful, while a little challenging.

While this conversion is specific to Aristo Craft couplers, it can be readily modified for the installation of Aristo-Craft couplers on other brands of rolling stock.

If you have any questions regarding this article, you may contact me through the Aristo-Craft Forum (<http://www.aristocraft.com>).

# MAY/JUNE CONSUMER SALE

Offer Valid in North America Only

BUY FOUR FREIGHT CARS, GET THE FIFTH FREIGHT CAR FREE!

Turn four cars into five with our May/June 2007 freight car sale. Purchase four cars of the same model (i.e. four Stock Cars, four Single-Dome Tank Cars), and get an additional fifth car of the same type free (plus S&H)!

*(Shipping & Handling for fifth car = \$10.00 U.S., \$20.00 Canada)*

- Customer must purchase and receive current production Aristo-Craft freight cars from dealer(s) during period of sale. Purchases from online auction web sites are not acceptable.
- ART46300T series Flat Car 2 Packs and ART46400T series Bulkhead Flat Car 2 Packs are both considered 2 cars for purposes of this sale.
- Aristo-Craft reserves the right to exclude any freight car, including discontinued road names that Aristo-Craft does not consider as current production.
- This sale includes the above current production freight cars listed in the 2007 Aristo-Craft Catalog, 2007 Aristo-Craft Price List, and Aristo-Craft On-Line Catalog at [aristocraft.com](http://aristocraft.com).
- ECLSTS & SELSTS Show Cars are not applicable for this sale.

***Offer Valid in North America Only!***

**INSTRUCTIONS:** MAIL ARISTO-CRAFT YOUR ORIGINAL ITEMIZED AND DATED RECEIPT, A NOTE WITH YOUR RETURN ADDRESS (NO PO BOXES) SPECIFYING WHICH ITEMS PURCHASED AND SHIPPING AND HANDLING FEE BY JULY 15, 2007 TO RECEIVE YOUR FREE PRODUCT(S). **PURCHASE MUST BE MADE BETWEEN MAY 1 AND JUNE 30, 2007.** SALE CANNOT BE COMBINED WITH ANY OTHER SALE OR PROMOTION. SEE ABOVE AND SALES RULES & REQUIREMENTS #11 & #12 FOR SHIPPING & HANDLING DETAILS.

Please address your sales request along with your receipt to:  
**ARISTO-CRAFT TRAINS/POLK'S SPECIAL SALES**  
**698 S. 21<sup>ST</sup> STREET, IRVINGTON, NJ 07111-4109**

## **SALES RULES & REQUIREMENTS (modified 11-29-05) READ BEFORE ORDERING!!!**

1. The ORIGINAL receipt is required to be sent to Aristo-Craft for approval of sales request. Computer generated copies and photocopies of receipts are strictly prohibited. Copies of receipts will be returned to the person who sent in the sales request without it being processed. Aristo-Craft will send the free offer directly to the customer and the sales dealer is not responsible for this transaction.

2. The receipt must be ITEMIZED, clearly showing the following..

- Which Aristo-Craft items were purchased (each item must be individually listed on the receipt)
- The price in which each Aristo-Craft item was purchased at
- The date when the Aristo-Craft items were purchased
- The name, address, and telephone of the hobby store from where the item was purchased
- The name, address, and telephone of the person buying the Aristo-Craft products.
- An invoice number (extremely preferable, but not mandatory)

Cash register receipts are NOT acceptable for this sales program and will be returned to the person who sent in the sales request without it being processed. We recommend that, if you receive a cash register receipt from your place of purchase, you ask for an itemized receipt instead.

3. Sales requests are not backordered. Sale items are selected from products that are in stock in the Aristo-Craft warehouse during the period of the sale. We reserve the right to send you a product of comparable price and quality of our choice if sales items are out of stock. Customer selections of specific roadnames are subject to availability.

4. Purchases must be made during the time period designated in the sales sheet. Your sales request must be received by us in the same time period. There are no exceptions. All sales requests that do not meet this criteria will be returned to the person who sent it in.

5. Sales are only for items designated in the Aristo-Craft sales sheet and do not pertain to any other Aristo-Craft items that are not mentioned. Sales requests that do not meet this criteria will not be processed. If there are any questions of interpretation of what is on sale for the current month, please contact Aristo-Craft. Aristo-Craft is NOT responsible for any sales advertised by dealers and or retailers.

6. The Aristo-Craft items you purchase from your dealer must be in stock. They cannot be backordered. You must take delivery on the purchased items from your dealer during the period of the sale. Sales requests that do not meet this criteria will be returned to the person who sent it in.

7a. Purchased items must be new. "first-use" items. Used, secondhand, and or auctioned (including internet auction) items are not acceptable for this sale.

7b. Items that are "cross-sold" (i.e., from consumer to consumer, or from dealer to dealer) are not acceptable for this sale. Consumer sales must be "dealer to consumer" only. Dealer sales must be "distributor to dealer" only.

8. Please allow 4-8 weeks for processing.

9. Original receipts returned upon request.

10. Aristo-Craft reserves the right to make the final decision as to whether a submitted receipt is valid for the Aristo-Craft Sales Program.

11. Each free item requires payment for Shipping & Handling. (If Shipping & Handling Fee is NOT Specified elsewhere on sales sheet) Most items are \$10.00 each. Heavy and large items are \$20.00. Oversized or heavy items may require additional fee. Small items are \$2.00 each up to five, and \$10.00 for orders of five or more. See sales list for specific prices. Please include a charge card number, check or money order.

12. When Sale is NOT restricted to Continental US: Canadian and Foreign orders must be on a charge card, International Money Order or check drawn on an American bank, NOT just on American Funds. Foreign shipments are three times (3x) the shipping and handling fee specified for domestic shipping listed elsewhere on sale sheet. Otherwise: Foreign shipments are \$30.00 for most items. Heavy and large items are \$45.00. Small items are \$6.00 each up to five, and \$45.00 for orders of five or more. There may be additional fees. Shipment is via surface or sea post. We will charge the actual amount on air shipments according to your instructions.

## Please Note

The In-Stock List lists products listed as on-hand in the computerized inventory database on the date listed with the In-Stock List and is only accurate for that date. The In-Stock List includes all products including but not limited to product for sale, factory samples, show samples, and product held for customers. We can not guarantee all product listed as in-stock is available for sale or distribution.

For periodically updated lists and new item information please visit the Aristocraft webpage [www.aristocraft.com](http://www.aristocraft.com).
