Introduction To O-Gauge Outside

Using O Gauge Trains and O Scale Accessories on Garden Railroads

Written by Paul D. Race for Family Garden Trains™. Reprinted with permission by AristoCraft Trains®

People have been taking their 3-rail O gauge trains outside on sunny days for nearly a century. Of course, the trains, the track, and even the buildings were rust-prone, so everything came back in when the dew started to fall. But a few brave souls built track and buildings that wouldn't rust and created permanent O-gauge garden railways throughout the 1900s. In Great Britain, live steam trains running on O gauge track have long been popular as well. Nevertheless O Gauge Outside never caught on as a widespread hobby.

When "Large Scale" trains running on 45mm track reinvigorated the Garden Railroading hobby, folks with an attic full of O-gauge trains wondered if they could build a garden railroad using trains they already owned. In fact, ever since we started the Family Garden Trains™ web site, we've been asked that same question in one form or another. And fortunately, the answers to the same old questions keep getting better, as new products and technologies become available.

Note: "O Gauge Outside" is recommended for "serious" O-gauge hobbyists who want to leverage their equipment and experience for outdoor railroading. If you have a couple of Lionel trains in the attic that you seldom run, you will probably be better off keeping them inside and getting

a Large Scale starter set to use outside. Otherwise you'll have to learn two hobbies at the same time (O gauge railroading and garden railroading) instead of just one. And your old trains might have some collectors' value, so keeping them indoors might be a good choice for that reason, too. Now for the good news part of the article:

O Gauge Outsiders Have New Track Options

The one non-negotiable in building a garden railway is weather-resistant track. Pioneering "O-Gauge Outsiders" have been building their own track from scratch or modifying "store-bought" track for years. For example, some track had rail material (like nickel silver or stainless steel) that was useful outdoors mounted in ties that were not. So they would paint, stain, or soak the ties to make them UV, rot, or insect-resistant. Today, Gargraves and Atlas, both longtime hobby suppliers, make track that can be used outside with a little careful planning.

O Gauge Trains Can Be Used Outside if They're Properly Stored When Not in Use

Unlike Large Scale trains, which are made for garden railroads, O gauge trains are not rust-resistant or UV resis-

John Blessing's O Gauge Outside railroad includes Gargraves track, O scale and Christmas village accessories, and a variety of rolling stock.

(continued on Page 2)

(continued from Page 1)

tant, and some are particularly vulnerable to sand in their gears. The most successful O-Gauge Outsiders are folks who have figured a way to get their trains in and out quickly, so they can run on pretty days and get their trains under cover in inclement weather without too much hassle either way. As an example, to the right you can see a "pet door" that the Blessings use to run their train in and out of their "train room" quickly.

O Gauge Trains ARE Big Enough to Use Outside

Most O gauge trains are about half the length and a quarter the bulk of similar "large scale" trains. But they are still large enough to see outside. Some folks like the fact that they can fit a lot of railroading into a small space. Some folks like the fact that they can fit a whole lot of railroading into a big space, too.

Note about O Gauge versus O Scale - By the way, not all trains that run on O gauge track (1.25" between the rails) are the same scale. O scale refers to a particular proportion (1:48) between a model and the "real thing." For example, an O scale building should be 1/48th the size of the real building. But most trains that run on O gauge track are actually a little smaller than O scale, especially in length. Fortunately, they are still plenty big enough to be effective outdoors if you plan properly. That's why we say "O scale accessories," but "O gauge trains."

Construction Techniques for Large Scale Garden Railroading Can Be Modified for O Gauge Garden Railroading

Because O gauge track is not as sturdy as Large Scale track, we recommend using a method that provides a sturdy base that supports the whole length of the track. This rules out simply laying the track on packed gravel, as some garden railroaders do. But track carefully laid on poured concrete "roadbed," on pressure-treated lumber, or on HDPE roadbed can be just fine. And all of those methods are lower maintenance in general than track

John and Gale Blessing used an adaptation of Bill Logan's HDPE Flexible Roadbed design to give their railroad wide, smooth support.

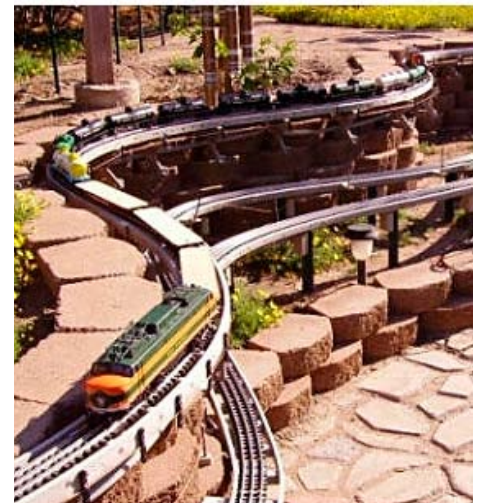

sitting on gravel, so the "trade-off" is worth it in the long run.

O Scale Buildings and Accessories Can Be Adapted for Use Outside

Although most buildings designed to go on Large Scale garden railroads are made to withstand serious abuse, they seldom encounter any abuse worse than direct sunlight, rain, and bird droppings. So it's not surprising that many O gauge outsiders have used O scale buildings and accessories successfully outside. As long as you take steps to protect your buildings from UV, weigh them down, and avoid putting them under walnut trees, you'll probably be OK.

Ready to Forge Ahead?

Though still lacking the manufacturer support of its Large Scale "big brother," O Gauge Outside is a growing hobby, with a growing number of available resources. If you're considering an O Gauge Outside railroad, Google "O Gauge Outside" to get to a bunch of useful materials (including ours, of course).

Moving outdoors can give O gaugers room to run long trains on wide curves, as this shot of the Blessings' railroad shows.

2010 ECLSTS Spring Show Wrap-Up Report

by Harry Hartman

Harry Hartman is the Large Scale Show Manager for the East Coast Large Scale Train Show.

Well, the 2010 Spring ECLSTS is now in the history books. From listening to people talk as they went out the doors and came back in for more goodies, they felt it was a great show.

TATE and his group of workers came up with an excellent idea for a fund-raiser for this years show. It was called the "Orphaned Trains" and it was a huge success! This project was where you brought in a train that you were no longer using or you had a double of and it was still in good shape. You donated it to the fund-raiser and they put a price on it. It was then put up for sale. All kinds of goodies from chocolate outhouses and trains to two real brake wheels from CSX engines. There were two items up for silent auction. This project raised \$1,706.48 for the Center for Missing and Exploited Children. Two "attaboys" need to be issued. One "attaboy" to TATE and his group for a job well done. The second "attaboy" to all of you that donated and/or purchased from the booth. Thank you very much!

This Spring 2010 show saw some first-time vendors and the return of some vendors that we have not seen for a couple shows. There were plenty of show bargains from many of the vendors. If you were looking for something in particular, I am sure you could find it at the show.

At the Aristo-Craft booth, Navin was very busy with a free software upgrade for the Revolution unit. This upgrade will allow you to operate your switches remotely. Simply amazing what all the Revolution can do and I am sure there

(continued on Page 4)

The line to get into the 2010 Spring ECLSTS show

Lewis Polk, Maryann Polk, and Scott Polk celebrate Polk's Hobby 75th Anniversary at the show

TATE greets a young fan at the show.

Aristo-Craft Forum members pose for a group picture at the ECLSTS

Star Hobby was one of the many vendors at the ECLSTS

are more things coming.

Also at the Aristo Booth, we got to see the paint sample for the RS3s and the PCC Trolley. We also saw the much anticipated Consolidation pre-production sample. There was a surprise party with cake on Saturday. Polk's Hobby celebrated 75 years and Lewis, Maryann, and Scott Polk were on hand to cut the cakes and hand them out to all that stopped by the Aristo-Craft booth for this celebration.

While we are on the subject of the 75th anniversary of Polk's Hobby, be sure to check out the four 2010 Club "Polk's 75th Anniversary" Plug Door Boxcars in limited edition for the 2010 Aristo Craft Railroad Club.

The P & WV offset coal hopper was a success. Most of them went out the door on Friday. The 2010 Fall ECLSTS Show Car was announced at the show. It will be a black single dome Dow Chemical Tank car. This car will come with metal wheels and come in 4 road numbers. It is what we have been hearing you ask for in a show car. (Black tank car, and from the western area.)

The club displays were outstanding as they always are. Some of the displays change from show to show and others add new items to their displays. A lot of time and effort goes into putting these displays together for the shows. Some have running water, fountains,

and log ponds. If you belong to a club and they are thinking about building a portable display to take to various functions, you certainly see all kinds of construction for these displays as well as different ways of hauling the displays to and from the shows.

Some observations have been posted that the show's attendance was way off from previous shows. When we ran the numbers for paid attendance (which does not include the club members displaying), the attendance was down about 10.5%, but the crowd that was there were looking and buying. Even the ticket sellers commented on how much goodies was going out the front doors and then those people coming right back in saying "I'm back for more!"

All in all, it was a great show, many old friends traded train stories and "how to do it better or easier" and we are looking forward to the Fall 2010 ECLSTS on September 24th and 25th. So mark your calendars and make your room reservations now. Remember, they have a Harley-Davidson "open house" that weekend in York and it does get crowded. The Fall ECLSTS should be a great time to see and pickup some of the new items that are scheduled to come out between now and then from various manufacturers. Hope to see you at the Fall ECLSTS.

Layout on display in the entry hall at the ECLSTS

Navin Shievdal working with customers at the Aristo-Craft booth.

New! Train Engineer Revolution 15-20 Amp Trackage Receiver *written by Stan Cedarleaf*

I received a prototype of the new Aristo Craft 15-20 Amp Trackage REVOLUTION receiver to do some testing. 15 minutes after unpacking the unit, I had it installed in place of the original 5 amp receiver in the battery car of my FABBA consist. The auxiliary harness plugged in, it was then linked and running my FABBA. All functions from the auxiliary harness on the new receiver work just like the original 5 amp receiver and I'm able to control 4 functions on the Sierra sound board that is installed in the battery car.

You may ask why it took 15 minutes. Well, the new 15-20 Amp Trackage REVOLUTION receiver is not a direct drop-in replacement for the 5 amp receivers but has all the features of the original 5 amp receivers. It is more that twice the size and measures 2 5/8 x 4 by 1 1/2 inch high. It will fit in most wide body tenders, as do the CRE 55471 10 amp TE receivers. However, this receiver was designed to be used in a battery car for use to control multi unit locomotives from the same receiver, which it does right nicely. It's also designed to be used as a trackage receiver to control the power to the track as did the CRE 55471. There is no outer case like the CRE 55471.

I've been running a 4 unit FABBA consist with the original 5-amp receiver since its debut in early 2009 with the REVOLUTION receiver and batteries mounted in a battery car behind the last FA unit. The 5 amp REVOLUTION receiver handled the 8 motor consist very well.

However, this was pushing the 5 amp envelope. Cold weather caused an increase in current draw and I actually tripped the overload protection in a 14.8 volt 4400 mAh Li-ion batteries. This was a rare occurrence but the consist had no trouble pulling 11 full sized aluminum passenger cars on Marty's layout for well over an hour. The only time an overload occurred was when one of the passenger cars derailed, causing a much greater drag on the locomotives. The situation was rectified (put the car back on the track) and the consist continued to perform throughout the battery life.

With the ambient temperature at 80 degrees is full sunshine, the first run with the new 10 Amp Trackage REVOLUTION receiver commenced with a 30 minute test powered by a 14.8 volt 5200 mAh Li-ion battery running at 100% throttle. The test train consisted of the FABBA, battery car and 5 Aristo Craft Streamliners. After running for 10 minutes, I checked the heat sink on the board for heat. It was

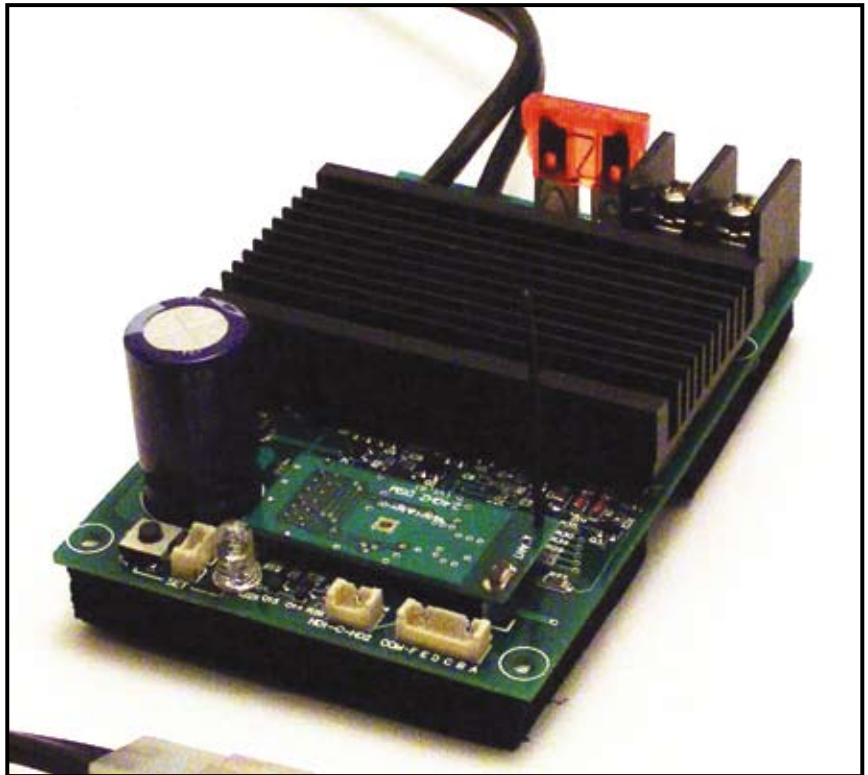

cool to just warm to my touch. The same as true after 30 minutes of running. The battery still had 15+ volts after the 30 minute run.

My next test was with one Aristo Craft 21.5 2000 mAh battery. I was wondering if the 2000 mAh rating for the battery was going to be enough to power the locomotives as I was drawing just a bit over 4 1/2 amps with the consist. The consist responded very quickly to the transmitter and ran for very well at 80% on the speed indicator on the transmitter. I decided to perform some "stress" tests on the system by operating at 100% throttle (full 21.5 + volts to the train) and throwing the train into full reverse. The throttle was set at a 2.5 second delay. At full forward speed, I pushed the reverse button. The train quickly slowed to a stop, then reversed to full speed without a problem. The procedure was performed 5 times within a matter of 2 minutes. No shutdown, no overload and the heat sink was just barely warm. The 2000 mAh battery had a run time of 45 minutes for this test and was just warm to the touch.

The next battery test was with a fully charged

18.5 volt 5200 mAh Li-ion. The consist was accelerated to 90% on the speed indicator and had a run time of 1 hour and 15 minutes. A 14.8 volt Li-ion battery was then tested with a run time of 1 hour and 10 minutes. That's a pretty good indication that the total motor draw is right close to 5 amps. I really don't have an effective way to check current draw however, I did try a "stall test" by stopping the train, then holding the locomotives on the track so they couldn't move forward, I increased the throttle to see the results. At 35% throttle, the wheels on all 4 locomotives started slipping on the track. At 60% throttle, the PCB in the battery kicked out and shut everything down. The receiver did not overload under those conditions. Not a very accurate test but one that shows the PCB's in the batteries work like they're supposed to.

Overall, I'm quite happy with the performance of the new 15-20 Amp Trackage REVOLUTION receiver in the initial tests using battery power from a battery car. The next test will be to use it to control a loop of track on a friend's large layout. He has 400 feet of stainless steel on his main line. "

New to G Gauge? An Introduction to the Hobby

by Lewis Polk

All of us need some recreational time away from the stresses of daily life and this hobby, garden railroading, is the perfect antidote.

It's done at home, so your spouse and children are there to help, participate and encourage your efforts, while knowing where you are at all times. It is a hobby where the full family can join the fun and help create a Lilliputian world at home. You can also enjoy a layout in a spare room in the house, attic, deck, porch or basement depending on your living arrangements when a garden area is not available.

There are lots of decisions to be made

*Examples of G-Gauge Railroads in action
(layout - Elaine Silets)*

when starting, but none are definitive enough to not allow adaptation of the other after you have found a method of operation you enjoy better than the others. For example:

Most people begin with Brass track that allows conduction of electricity or provides a strong base for battery power

operation. With brass track you leave all options open. Stainless steel track is a more expensive operation, but is virtually as conductive of electricity and does not require the more often cleaning that Brass does in certain climates where oxidation of the Brass requires

(continued on Page 7)

(continued from page 6)

daily cleaning. If you are only going to limit your trains to battery or live steam than aluminum track is a more cost efficient choice.

With brass track, you can use track power with DC power supplied from a power supply. Most garden trains are operated by DC motors and the cleaner the current, the longer the life of the motor and better performance can be obtained. Aristo-Craft makes several switching power supplies and two different capabilities of controllers to operate the trains along with radio control devices to do the same.

However, many people choose to use battery power, which bypasses the need to worry about cleaning the track ever or conductivity in joints along the rail line. The offset is that the batteries need to be charged in advance of running, though the cost is similar to purchasing power supplies. You can also have two sets of batteries with one on charge while the other is running and typically swap them when the operational one runs out of power. For track power, you can purchase rail clamps to ensure conductivity, especially on curves or simply solder wire connections between the joints of track. You typically need only one pair of wires connected from your power supply to the track every 200' or so of track and every piece of Aristo-Craft track has a terminal for that connection on the bottom side of the track. Each rail clamp has a spot to wire track power to and of course can be anywhere on the layout.

Some people want DCC, which is an AC signal sent through the track and requires a relatively clean track to receive such signals clearly. This is a proven system, but you can also choose our Revolution for similar results without worries about the track cleanliness. The track cleanliness is an issue in some parts of the country where track oxidization causes more problems than in other areas.

Our Revolution has a backlit graphic screen, with most of the instructions menu driven on the screen. It's written in clear English, so it's easier to adapt to in our opinion.

There are several power packs that are available for G Gauge and Aristo-Craft makes a line of switching power supplies that give you a clean current on the track. If you use radio control than no separate controller is needed, but if not you will need a controller to moderate the power coming from the switching power supplies. Aristo-Craft has two such controllers in a 10 amp or 15 amp version depending on how many trains you will have on the track at one time. The 10 Amp controller will handle 80% of your needs until you get into larger consists of trains and multiple engines on the same track.

Track can be purchased in sectional pieces, with ties attached in a variety of curves and straight lengths. You can also purchase rail, ties and a rail-bender separately to make you own meandering railway through your garden. Here you can have the track follow natural pathways in your garden instead of clearing a fixed route through your garden according to the available dimensions commercially available. We feel that 90% of the people purchase sectional track and professional garden landscapers tend to bend their own rail to match their envisioned route through their designed garden. Either way, the trains will run similarly, though the less joints the less rail clamps are needed.

Another early decision is how to lay a roadbed or even if it should be on the ground or elevated to a waist high level for easier working on the trains without bending over on the ground. This is often an age related decision as it's not bending down that's hard, but getting back up. Of course there are gardening benches to assist with groundwork, but many people have built elevated railways using pavers to make filled in levels or with post like devices to hold the track. This is a personal choice,

but either provides a fulfilling result that appeals equally to all.

The garden itself is a decision as some prefer a true railroad route that is often devoid of flowers and shrubs and others prefer a true garden with trains running through it. The shrubs and flowers can be of the miniature type to look more in proportion to the size of the trains, but a true scale look is not possible for Mother Nature to provide. It's your railroad, so choose whatever pleases you.

Live steam locos are an option too, but require a lot of tinkering for operation and almost always are run on elevated track to allow for the often-constant adjustments that it requires. It's fun to run a model as the real trains ran, but perhaps a little more limiting on the time required to enjoy this form of garden railroading. Mixing Live Steam with battery or track-powered operation is a great option to enjoy the full spectrum of the hobby.

In Northern climates the track will move with the heaving of the ground in the icing stages of Winter, so how you lay the track becomes a decision of importance and must be decided on day one. Most people dig a 6" or so deep trench with a width large enough to accommodate the single or double trackage to be used. G Gauge track uses a 1 & 3/4" rail spacing, so you will need perhaps a 6" width to the trench for each track laid. This also prevents most trains from colliding with side-to-side motion when passing each other. The trench is often filled with Chicken Grit or small pebbles and can be glued in place with white glue in water solution or left free floating to allow for winter heaving. There is no perfect solution and will require some maintenance each Spring, but that is normal in any garden.

Other options are to use brick pavers for the roadbed or in some cases a foam board cut to the size of the

(continued on Page 8)

(continued from page 7)

tracks and then back covered with dirt. We suggest purchasing a book to help choose the best solution for your climate and garden and there are several books available that can usually be found in "Garden Railways" magazine, found in most book stores.

There are several ways to control your trains, whether or not by track power and a controller, Digital Command Control, which is by a signal sent through your rails and a decoder in each locomotive, or by radio control, where your track power is controlled remotely or with a receiver in each locomotive to control each locomotive independently or in consists. This choice needs to be carefully considered, but all of these methods can be co-joined and operated simultaneously until one stands out as most workable for you. Both DCC and radio control are more expensive and both can be run on track power or battery power, so that choice is a separate choice. We suggest talking to a local dealer or calling one that specializes in remote operation if they can't be found in your area. Aristo-Craft has a link to a YouTube video explaining our Revolution controller available on our website that will help understanding our proprietary system.

Scale and gauge is often a key question, but the truth is that all scales run on G Gauge track and while different scales are often not run in the same lash-up of trains, you can run a variety of scales in different lash-ups on the same layout. It's your train and you can run in any manner you wish. It's our experience that about 10% of the people pick one scale and only run that, but that most people mix scales. Usually, older trains prior to 1900 are 1/20.3 scale and replicate narrow gauge trains, while standard era trains are usually 1/29 or 1/32 scale and represent trains after 1900. There are a wide variety of models in both scales and the choice is personal. Again, you can mix scales on the same layout and it's rare to find any visitor that will notice the difference.

Another question is the height of the track rail. Most people use Code 332 rail that is higher than a true scale size for the track and is like high rail trains in O Gauge. However, the closer scale looks are much harder to stabilize out of doors, where heat and cold cause track to buckle and bend. The more appropriate size of Code 250 can best be used indoors or in warmer climates where freezing conditions do not affect the roadbed of a layout. The lower the height of the rail the more potential derailments can happen. It is a matter of personal choice to decide that more work on the roadbed is worth the more scale look that many people cannot discern anyway. However, you will know yourself and if you're willing to do the extra work, it is an option.

Aristo-Craft does offer a full range of locomotives, cars, buildings, power supplies, radio control, accessories and of course track in brass, stainless steel and aluminum. Whichever choice you make on any of the above questions we do have a wide range of parts to help you complete your layout.

Garden Railroading is not inexpensive, but provides a terrific bang for the buck considering that it's done at home and you don't have to travel to do it. The entire family can participate in the fun of landscaping, choice of flowers and the operation of the trains. There is often some collectability to the trains that enhances the value over time and if carefully cared for can be sold. The buildings, figures and die-cast cars that are added bring life to the layout and everyone can be on the lookout for accessory details to add to the train layout.

There are great informational web sites with thousands of layout pictures and videos, like www.lsol.com and www.mylargescale.com that can help you with questions that may come up or also www.aristocraft.com for questions just on Aristo-Craft Trains.

So, what would we do if beginning a layout??? We'd go with brass track and battery operation in code 332 sectional tracks. I would make my layout at a waste

high level and have a floral garden as much as possible with an elevated design. I would operate with the Revolution radio control system and put the batteries in a trailing car. I would mix standard era trains in a fixed consist with narrow gauge trains run on their own consist. I would use 1/24 buildings and die cast vehicles that fit all eras at the same time and I would keep flowers at an approximate scale size by using miniature plants in the region of the track layout. I would keep the trains inside when not running, but leave the buildings and accessories in place. I would build a shed near the track to store the trains when not in use and have a weather proof outlet near the shed to provide battery charging for spares while running otherwise. I would use sound in all locos and use smoke fluid for running at all times. Nothing brings a layout to life like sound and smoke.

For my road bed I would use foam board, with holes drilled for drainage every 3" and then backfill with gravel to disguise the roadbed. The foam should be spiked to the ground after it's leveled and a good 2" of gravel should be put on top before you lay the track down.

You don't have to start out with a giant layout that is the epitome of your dream layout, but rather start out modestly as you are learning. We can suggest our trestle set ART7104, which has a suggested selling price of \$47.00 and if you wish to expand it in size we have an all 8 3/4 height set ART7106 at the same price. If you use wood screws to attach the trestles to the track you will have no problems with wobbling of the trestle pieces. You need 2 1/2 boxes of curved track ART11100 to complete this layout, but can substitute other curves if you wish to go to a larger diameter (radius) track. A small loco, like our Lil' Critter and a few 20" cars or an Eggliner will get you started in a confined 4'X8' area in your garden. This is a highly recommended way to start your hobby and learn before attempting a more adventurous layout.

Most importantly, enjoy this hobby, which is a way to make a moving piece of artwork as part of your life.

- Please review the Aristo-Craft in-stock list for the latest updates on track availability.

INSTRUCTIONS: MAIL ARISTO-CRAFT YOUR ORIGINAL ITEMIZED AND DATED RECEIPT, A NOTE WITH YOUR RETURN ADDRESS (NO P.O. BOXES) SPECIFYING WHICH ITEMS PURCHASED AND SHIPPING AND HANDLING FEE BY MAY 15, 2010 TO RECEIVE YOUR FREE PRODUCT(S). **PURCHASE MUST BE MADE BETWEEN MAY 1, 2010 AND JUNE 30, 2010.** SALE CANNOT BE COMBINED WITH ANY OTHER SALE OR PROMOTION. SEE ABOVE AND SALES RULES & REQUIREMENTS #11 & #12 FOR SHIPPING & HANDLING DETAILS. OFFER IS VALID IN NORTH AMERICA ONLY.

Please address your sales request along with your receipt to:
ARISTO-CRAFT TRAINS/POLK'S SPECIAL SALES
698 S. 21ST STREET, IRVINGTON, NJ 07111-4109

SALES RULES & REQUIREMENTS (modified 11-29-05) READ BEFORE ORDERING!!!

1. **The ORIGINAL receipt is required to be sent to Aristo-Craft for approval of sales request.** Computer generated copies and photocopies of receipts are strictly prohibited. Copies of receipts will be returned to the person who sent in the sales request without it being processed. Aristo-Craft will send the free offer directly to the customer and the sales dealer is not responsible for this transaction.

2. **The receipt must be ITEMIZED**, clearly showing the following..

- Which Aristo-Craft items were purchased (each item must be individually listed on the receipt)
- The price in which each Aristo-Craft item was purchased at
- The date when the Aristo-Craft items were purchased
- The name, address, and telephone of the hobby store from where the item was purchased
- The name, address, and telephone of the person buying the Aristo-Craft products.
- An invoice number (extremely preferable, but not mandatory)

Cash register receipts are **NOT** acceptable for this sales program and will be returned to the person who sent in the sales request without it being processed. We recommend that, if you receive a cash register receipt from your place of purchase, you ask for an itemized receipt instead.

3. **Sales requests are not backordered.** Sale items are selected from products that are in stock in the Aristo-Craft warehouse during the period of the sale. We reserve the right to send you a product of comparable price and quality of our choice if sales items are out of stock. Customer selections of specific roadnames are subject to availability.

4. **Purchases must be made during the time period designated in the sales sheet.** Your sales request must be received by us in the same time period. There are no exceptions. All sales requests that do not meet this criteria will be returned to the person who sent it in.

5. **Sales are only for items designated in the Aristo-Craft sales sheet** and do not pertain to any other Aristo-Craft items that are not mentioned. Sales requests that do not meet this criteria will not be processed. If there are any questions of interpretation of what is on sale for the current month, please contact Aristo-Craft. Aristo-Craft is **NOT** responsible for any sales advertised by dealers and or retailers.

6. **The Aristo-Craft items you purchase from your dealer must be in stock.** They cannot be backordered. You must take delivery on the purchased items from your dealer during the period of the sale. Sales requests that do not meet this criteria will be returned to the person who sent it in.

7a. **Purchased items must be new.** "first-use" items. Used, secondhand, and or auctioned (including internet auction) items are not acceptable for this sale.

7b. **Items that are "cross-sold"** (i.e., from consumer to consumer, or from dealer to dealer) **are not acceptable for this sale.** Consumer sales must be "dealer to consumer" only. Dealer sales must be "distributor to dealer" only.

8. **Please allow 4-8 weeks for processing.**

9. **Original receipts returned upon request.**

10. **Aristo-Craft reserves the right to make the final decision as to whether a submitted receipt is valid** for the Aristo-Craft Sales Program.

11. **Each free item requires payment for Shipping & Handling.** (If Shipping & Handling Fee is **NOT** Specified elsewhere on sales sheet) Most items are \$10.00 each. Heavy and large items are \$20.00. Oversized or heavy items may require additional fee. Small items are \$2.00 each up to five, and \$10.00 for orders of five or more. See sales list for specific prices. Please include a charge card number, check or money order.

12. **When Sale is NOT restricted to Continental US: Canadian and Foreign orders must be on a charge card, International Money Order or check drawn on an American bank, NOT just on American Funds.** Foreign shipments are three times (3x) the shipping and handling fee specified for domestic shipping listed elsewhere on sale sheet. Otherwise: Foreign shipments are \$30.00 for most items. Heavy and large items are \$45.00. Small items are \$6.00 each up to five, and \$45.00 for orders of five or more. There may be additional fees. Shipment is via surface or sea post. We will charge the actual amount on air shipments according to your instructions.
